Yearbook Notes

Various entities involved in hydrological-related applications such as in the fields of infrastructure, research and development, agriculture, flood mitigation, water supply, and many other related aspects are all in need of hydrological data. The PRFFWC's hydrological observations are relevant to a lot of users who shares the same interests in the hydrological characteristics of the PRB. Having a dataset of organized information presented in a readily usable output is one of the reasons why a summary yearbook was first thought of. For PRFFWC having a set of validated and "reliable" hydrological record is a significant requirement in coming out with a sound river flow forecast.

The two important factors in producing a robust hydrological summary are the quantity and quality of the hydrological data. It would be quite ideal if both conditions represent the data series.

The year 2019 was originally considered as the initial starting point of the summary data series for several reasons. First, it was at the start of year 2020 that the PRFFWC did a more comprehensive hydrological data series quality checks starting with year 2019. Second, the timing was just right as central focus was given in completing the data summary report. It was done at a time when no major and regular activities were being handled by the center (during the Enhanced Community Quarantine period, March to May 2020). Third, it was also at a time when the center, finally, has had the will and the drive to finish a material that was already long overdue. At that point in time, the idea of working out the other yearbooks would have been going backwards, hopefully, completing the hydrological yearbooks of the PRFFWC. Eventually, this idea did not push through.

While best efforts were exerted to validate and complement the hydrological data series of each of the stations in the system, there still remain a substantial periods of gaps and breaks in the series particularly for water level data of several stations. A number of obvious erroneous data records were deleted from the series. Few attempts were made to fill-in the data gaps and breaks particularly only those that have relatively short gap periods of several hours.

Scope and Limitations

1. This Data Yearbook presents the hydrological data summary of the 18 rainfall stations and 9 water level stations of the PRFFWC for the year 2019.
2. The rainfall and water level dataset in this report covers the period starting from the past 1-hour observation ending at 0900H of January 01, 2019, and will end at 0800H of 01 January 2020.
3. Accordingly, it follows a 24-hour daily total (or average for WL) which starts at (almost) 0801H of the present day and ends at 0800H of the following day (meteorological day); Water level summary values for maximum data are reported as per instantaneous observed value from the dataset but the average value is taken using the same reporting time period as in total rainfall for a met day.
4. The shortest time period considered in this summary report is 1 hour.
5. Units used for some of the hydrological elements:
 - a. Rainfall – millimeters (mm)
 - b. Water Level (River Stage) – meters (m)
 - c. Cross-sectional area – square meter (m^2)
 - d. River Discharge – cubic meters per second or cumecs (m^3/sec)
 - e. Rainfall day – rain-days
6. The minimum rainfall amount for telemetry stations is 1 mm; and for the rainfall observations in PRFFWC in CSFP, the minimum is 0.25 mm;
7. Rain-day is considered as a day with at least 1 mm of rainfall for telemetry stations; and at least 0.25 mm for PRFFWC in CSFP station;
8. The hydrological data summary presented in this yearbook are the daily rainfall observations (met day total), monthly rainfall and average, maximum rainfall total of various periods, and total rain-days per month; the daily water level averages (met day), maximum stage for each month and other regular information that were extracted from the available data series of each station.
9. For the daily rainfall presentation table, yellow shaded cell indicates rainfall values between 1 to 60 mm for telemetry stations (0.25 to 60.0 for PRFFWC-CSFP station); pink shade cells from 61 to 180 mm (60.25 to 180.0 for PRFFWC-CSFP station); light-red shade cells for values greater than 180 mm. Likewise, for water level summary, cell shades are in a graded color scale from a white shade to a regular semi-orange shade that is relative to an increase in water level values. Thus, a “0.00” value (minimum) is white and maximum value within the table will be orange shaded. In the summary below the daily value tables (the daily rainfall and in the average daily water level tables) a green shaded cell indicates the maximum value in their respective rows.

Disclaimer: The dataset summary presented herein have been processed and validated through several steps using the best possible means available to the PRFFWC at the time of processing. However, still it is possible that results may contain inadvertent errors such as typographical in nature, errors resulting from possible misuse of excel formulae, and other similar factors. The summary information in this yearbook report may be revised as new analyses emerge.

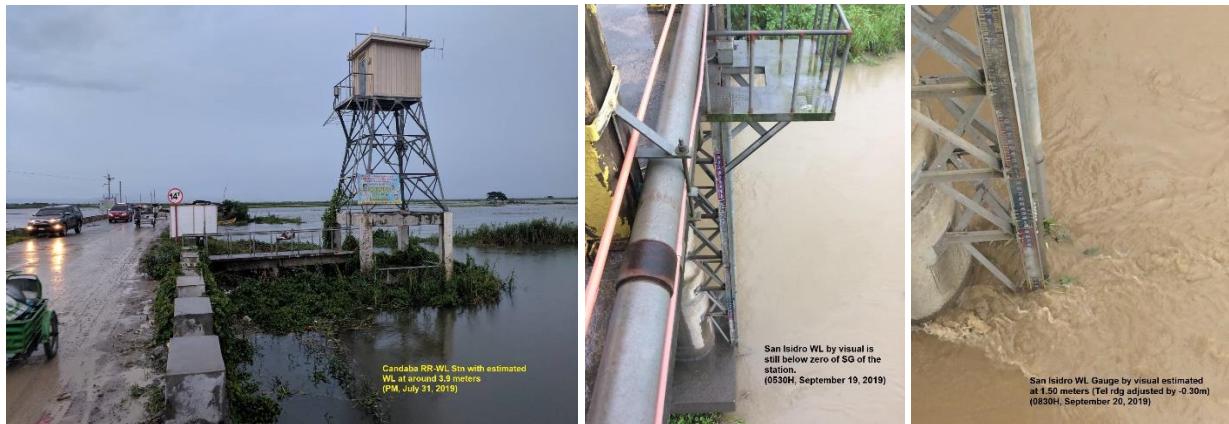

Users noting any errors that they may have encountered in this report are requested to inform the PRFFWC (e-mail: prffwc@gmail.com). Furthermore, users may use the information contained herein at their own risk.

Data Series Issues of 2019

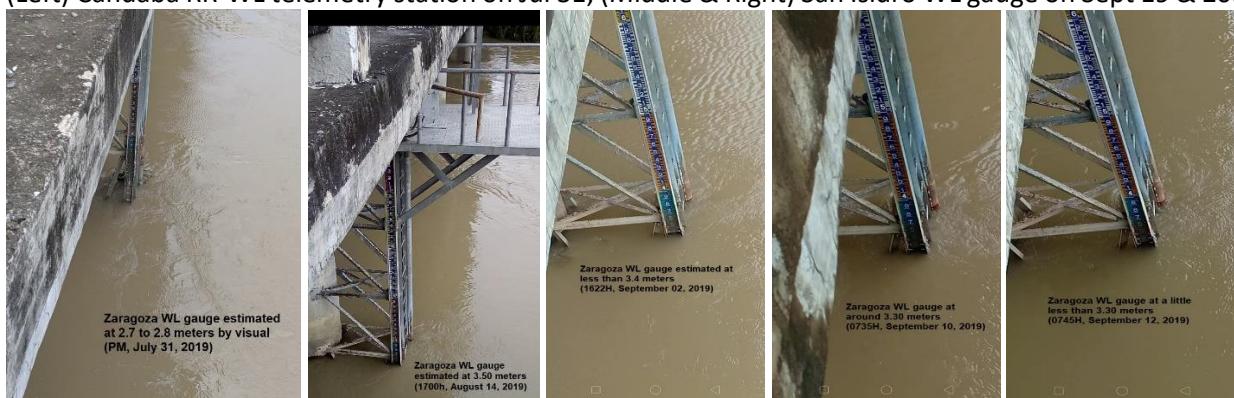

1. January: Candaba WL cannot go below 2.85 m (?) and all the record starting 0000H, 08 were deleted from the series; Zaragoza WL long periods of 1.35 or below readings may already be at zero gauge or below (deleted from the series starting 0000H, 24).
2. February: Candaba WL record was not included in the data series; Peñaranda & San Isidro WL are zero for the whole month; Several RR stations have zero totals for the month; Zaragoza WL have some unreliable points along the series (deleted from start of month to 0000H, 05); Sasmuan WL have some erratic observations but were not adjusted.
3. March: Candaba WL record was not included in the data series; Peñaranda & San Isidro WL are zero for the whole month; Several RR stations have zero totals for the month; Zaragoza WL have may some unreliable points along the series.
4. April: Candaba WL record was not included in the data series; Peñaranda & San Isidro WL are zero for the whole month; Zaragoza WL have some filled-in points by eye-fit (0800H-1000H, 15) and some points that were deleted from the series (from 1500H, 18 to 0900H,27).
5. May: San Isidro WL is zero for the whole month; Candaba WL record was deemed erroneous and was not included in the data series; portions of Zaragoza WL were also deleted from the series.
6. June: Peñaranda & San Isidro WL are zero for the whole month; Candaba WL record was deemed erroneous and was not included in the data series; Zaragoza WL may have some unreliable data in the data series (deleted portions in the data series)
7. July: San Isidro WL is zero for the whole month; Zaragoza WL have erratic and unreliable readings – portions were deleted; Candaba WL series was not included until 0900H, 17 after which all readings adjusted by -0.30m; Zaragoza WL have many unreliable readings and portions were deleted from the series. Sulipan RR may seem unreliable starting 0001H, 29.
8. August: Sulipan RR may seem unreliable at beginning until 2nd day of the month; San Isidro WL is zero for the whole month; Zaragoza WL adjusted by -0.50m as per validated WL undertaken on 1700H, 14; Zaragoza WL sensor replaced and readings corrected starting 1700H, 23; Candaba WL adjusted by -0.30m.
9. September: Sulipan RR had some doubtful observations from 2200H, 02 to 1700H, 03 but no adjustments carried-out; San Isidro WL adjusted by -0.30m from 0300H, 19 to 0400H, 22 based from validated picture; Zaragoza WL have several validating pictures during the month (data verified)
10. October: Candaba WL starting at 0800H, 02 all data disregarded until end of month; San Isidro WL is zero for the whole month; **Mayapyap RR restored and relocated at NIA-UPRIIS compound, observations started 1200H, 16**; Sasmuan WL with some erratic readings (not adjusted).
11. November: Candaba restored on 1400H, 21; San Isidro WL out-of-order starting 1200H, 18 due to bridge rehabilitation at the gauging site. Zaragoza WL at 0.11 or below for a relatively long period may be at zero gauge or even way further below (portions were deleted).
12. December: San Isidro WL out-of-order whole month; Zaragoza WL at 0.11 or below for a relatively long period may be at zero gauge or way further below (parts were deleted from the series).

Data Validation by pictures (2019)

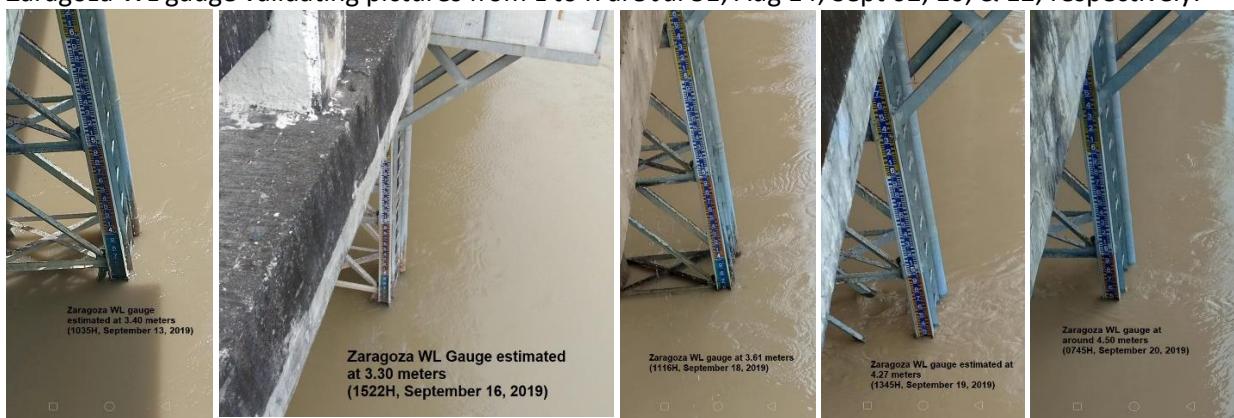

WL data are validated by pictures (photos) of the station's SG that were taken during field trips. This is the most practical way of filling-in gaps and breaks, correcting / adjusting the WL data series. For RR data, the only means of filling-in the gaps and breaks, and mainly correcting data distribution in the supervisory dataset is by referring to the stations' data loggers. Below are the validating pictures of some WL stations of PRFFWC:

(Left) Candaba RR-WL telemetry station on Jul 31; (Middle & Right) San Isidro WL gauge on Sept 19 & 20.

Zaragoza WL gauge validating pictures from L to R are Jul 31; Aug 14; Sept 02, 10, & 12, respectively.

Zaragoza WL gauge validating pictures from L to R, Sept. 13, 16, 18, 19, & 20, respectively. (some pictures were provided by the Zaragoza MDRRMO)

The maximum monthly total values for some stations may be smaller than their 480 hours (20 days) of unrestricted sliding time total. This means that the 20-day total transcends 2 adjacent months. Likewise, the 24-hour unrestricted sliding time period will be much larger than the meteorological day (fixed 8am to 8am) total.

Table A-3. Water Level Station notes

Water Level Station	Elevation of "0" of Staff Gauge (m) (as of Aug. 2009)	Rating Curve (RC) Equation as of April 2009	RC range of applicability
Sapang Buho	50.212	$Q = 4.015 (H - (-2.94))^2.961*$	$0 < H \leq 3.4$
Zaragoza	10.213	$Q = 12.111 (H - 0.0)^2$	(for validation)
Peñaranda	22.498**	$Q = 2.30 (H - (-1.20))^2$	$0 < H \leq 4.0$
San Isidro	9.585	$Q = 15.2 (H - (-1.70))^2$	$0 < H \leq 8.0$
Arayat	0.077	$Q = 9.106 (H - (-0.39))^2$	$0 < H \leq 9.0$
Candaba	-0.157	$Q = 1.80 (H - (-1.30))^2$	$0 < H \leq 2.0$
Sasmuan	-1.147	$Q = 1.50 (H - (-2.0))^2$	$0 < H \leq 2.0$
Sulipan	-0.062	$Q = 9.50 (H - (-0.4))^2$	$0 < H \leq 3.0$
Mexico	5.933**	$Q = 11.0 (H - (-0.50))^2$	$0 < H \leq 3.0$

Above table are still the latest information for PRFFWC streamgaging sites. Rating curve equations remains the latest available for now. The RCs should be updated on a regular basis.

Figure AA-5. Mexico WL percent duration curve (2019)

Note: Water Level percent duration curves for some of the streamgaging stations for the year 2019 were produced. San Isidro, Peñaranda, Zaragoza, Sulipan and Candaba streamgaging stations were not included due to non-continuity of river stage information during the year. San Isidro and Peñaranda stations' have many "0" gage readings and gauge should be lowered further, say 1 to 2 meters down, to have more low flow observations. Likewise, Sapang Buho and Mexico stations' gages should also be adjusted further below its present "0" gage reading. On the other hand, Zaragoza, Sasmuan and Candaba have quite a number of gaps and breaks, and erroneous records that were deleted from the data series.
